Thanat Vijitrakanlikit

Data Scientist

Tel: 098-513-2588 | Email: Thanat.vij@dome.tu.ac.th | Linkedin: linkedin.com/in/thanat34423
Address : Bangkok, Thailand

Objective Statement

A Digital Technology and Innovation student at Thammasat University with hands-on experience in machine learning model development, Computer Vision, and data analysis. Interested in data-focused roles across Data Science, Data Analytics,Data Engineering, and Business Analytics— with a particular passion for building ML/AI solutions that solve real-world problems, especially in healthcare and public health.

Skills & Abilities

Programming Languages : Python (Primary) | SQL | Java | JavaScript | CSS
Machine Learning & Deep Learning:

- Model Training & Optimization | Data Augmentation | Dataset Management
- Computer Vision – Image Classification **(NSC Project)** | Predictive Modeling **(Beginner)**

Data Science & Analytics:

- Exploratory Data Analysis (EDA) | Statistical Analysis | Data Cleaning & Preprocessing
- Power BI | Advanced Excel | Data Visualization | Business Intelligence

Development & Tools: MERN Stack (MongoDB, Express.js, React, Node.js) | Figma (UI/UX Prototyping)
Soft Skills : Analytical Thinking & Problem Solving | Cross-functional Collaboration | Adaptability & Eagerness to Learn
Language skills : Thai: Native Proficiency | English: IELTS 5.5 (B2 Equivalent) – Good command of English; capable of technical communication and professional reporting

Education

Bachelor of Science in Digital Technology and Innovation (B.Sc. DTI)
Faculty of Science and Technology, Thammasat University, Lampang | Aug 2024 – Present | GPA: 2.89
Primary – High School
Saint Gabriel's College, Bangkok | 2013 – 2024 | GPA: 3.09

Experience & Projects

National Software Contest (NSC) | Team Leader | 2024 – 2025
***Project: PakD** – AI Oral Health Analysis mobie Application*

- Developed an AI-based mobile app using Computer Vision (CV) for real-time oral health image classification and diagnosis
- Executed full end-to-end data science process: data collection, cleaning, augmentation, model training, validation, and performance testing
- Optimized ML model accuracy through iterative feature engineering and hyperparameter tuning
- Automated data preprocessing workflows to improve pipeline efficiency
- Successfully secured national project funding through competitive selection process

Skills: Python, Machine Learning, Computer Vision, Data Augmentation, Model Deployment, Project Management
CP CUP 2025 National Round | CoreLab Member | 2025
***Project: NutriMatch** – Personalized AI Nutritionist Platform (CPF / MorDee App)*

- Performed exploratory data analysis (EDA) on medical and nutritional datasets to uncover patterns and actionable health insights
- Designed predictive AI solution linking patient data to personalized meal plans — addressing a real business challenge in food and healthcare
- Collaborated with cross-functional team (data science, design, business) to propose data-driven improvements to operational processes
- Created data visualizations and business intelligence artifacts to communicate findings to stakeholders and national judges

- Built complete Business Proposal with financial modeling, revenue structure, and expenditure projection

Skills: EDA, Statistical Analysis, Predictive Modeling, Data Visualization, Business Intelligence, Cost Structure

KU MedAI Innovation Challenge 2026 | Team Member (TDET Team) | Mar 2026

Project: TDET-Scan *– AI Smart Microscope Concept for Blood Disease Severity Assessment*

- Researched clinical literature on Thalassemia and Dengue diagnosis to identify a critical gap: current rapid tests detect infection qualitatively but cannot assess severity quantitatively — leading to delayed triage decisions
- Synthesized findings from medical journals, CDC resources, and hematology datasets to propose a smart microscope concept integrating AI-assisted blood smear analysis
- Designed system architecture and user workflow in Figma — covering AI pipeline concept,offline-first deployment for rural clinics, and Human-in-the-Loop verification flow
- Presented research-backed pitch to a panel of judges including deans from Faculty of Medicine, Nursing, Pharmacy, and Public Health at Kasetsart University (Mar 2026)

Skills: Medical Research, Literature Review, System Design, Figma, Healthcare AI Concepts
