Tel: +66 98-513-2588 | Email: Thanat34423@gmail.com | [LinkedIn](#) | [GitHub](#) | Bangkok, Thailand

PROFESSIONAL SUMMARY

Aspiring Data Scientist and Data Analyst with practical experience in end-to-end Machine Learning pipelines, predictive analytics, and scalable digital solutions. Proven leadership (NSC, KU MedAI) and cross-functional collaboration (CP CUP) in national competitions, with expertise spanning dataset curation, predictive modeling, and data-driven business proposals. Passionate about translating complex operational data into actionable insights that drive business innovation and strategic decision-making.

SKILLS

- Programming : Python, JavaScript, Java, SQL
- Data & Machine Learning: Machine Learning, Computer Vision, Model Training & Optimization, Data Augmentation, EDA, Statistical Analysis, Power BI, Excel for Data Analysis & Visualization, Data Visualization, Predictive Modeling, Business Intelligence
- Web Development: HTML/CSS, MERN Stack (MongoDB, Express.js, React, Node.js), REST API, FastAPI
- Tools & Design: Git, GitHub, Figma (UI/UX Prototyping), Command Line / CLI
- Methodologies & Professional Skills: Agile/Scrum, Leadership, Analytical Thinking & Problem Solving, Cross-functional Collaboration, Adaptability & Eagerness to Learn, Communication, Public Speaking, Pitching
- Languages: Thai (Native), English (Professional Working Proficiency)

VOLUNTEER

Student Committee, Faculty of Science and Technology | Thammasat University

May 2025 - Present

Accounting Officer (current term)

- Managed the central fund for faculty-wide student activities, overseeing budget allocation and procurement for large-scale events such as the freshman welcome program

Human Relations Officer (previous term)

- Served as the primary point of contact for publicizing faculty- and university-wide events (e.g., Thammasat Lampang's freshman welcome week) to students and staff, requiring direct outreach and coordination

COMPETITIONS

National Software Contest (NSC) 2026 | Team Leader

Feb 2026 - Aug 2026

Project: BloodScope – AI-Powered iOS App for White Blood Cell Abnormality Detection

- Led a 3-person team building an on-device AI app classifying 13 white blood cell types from smartphone microscope images for community hospitals
- Curated a 17,767-image dataset from 4 sources; built a YOLO26n pipeline with degradation augmentation, repeat-factor sampling, and equalized focal loss to address class imbalance and domain gap
- Achieved 86% mAP50; validated against real-world hospital images within 6% of standard test accuracy
- Deployed the model on-device via CoreML in a Flutter iOS app; advanced to the NSC 2026 National Final Round (Health, Disability & Elderly Care category)

KU MedAI Innovation Challenge 2026 | Team Leader

Feb 2026 - Mar 2026

Project: TDET-Scan – AI Smart Microscope Concept for Blood Disease Severity Assessment

- Synthesized clinical literature on Thalassemia and Dengue diagnosis to identify a quantitative-severity gap in current rapid tests, leading to delayed triage decisions
- Designed system architecture and workflow in Figma, covering an AI pipeline, offline-first rural deployment, and human-in-the-loop verification
- Presented research-backed pitch to a judging panel of faculty deans at Kasetsart University

CP CUP 2025 National Round | CoreLab Member

Aug 2025 - Nov 2025

Project: NutriMatch – Personalized AI Nutritionist Platform (CPF / MorDee App)

- Performed exploratory data analysis on medical and nutritional datasets to uncover actionable health insights
- Designed a predictive AI solution linking patient data to personalized meal plans
- Collaborated with a cross-functional team (data science, design, business) to propose data-driven improvements to operational processes
- Built a complete business proposal with financial modeling, revenue structure, and expenditure projection
- Created data visualizations and business intelligence artifacts to communicate findings to national judges

National Software Contest (NSC) 2025 | Team Leader

Feb 2025 - Aug 2025

Project: PakD – AI Oral Health Analysis Mobile Application

- Led development of an AI mobile app for real-time oral health image classification using Computer Vision
- Executed the full data science pipeline - collection, cleaning, augmentation, model training, and validation
- Secured national project funding through a competitive selection process

EDUCATION

Thammasat University | Lampang, Thailand

Aug 2024 - Present

Bachelor of Science in Digital Technology and Innovation (B.Sc. DTI) | GPA: 2.96
